SUMMARY

Product Owner at PepsiCo with 4+ years of shipping B2B and D2C products across global markets. With an eye for finding where AI enablement closes real user experience and business gaps, then ship the agentic solutions against it following responsible AI practices. Bringing engineering depth and product strategy together to move fast without breaking things.

PROFESSIONAL EXPERIENCE

PepsiCo April 2024 – Present
Product Owner Hyderabad, India

- Scoped and prototyped a natural language analytics layer for the D2C loyalty platform by exposing all application APIs as MCP tools so an LLM agent routes a business question to the right data source and assembles the relevant KPIs on the fly. Defined the AI eval criteria - query routing accuracy, KPI correctness against known dashboard baselines and running regression tests. This **collapsed a 2-sprint build per dashboard request into a self-serve query**.
- Drove AI-accelerated dev **workflow** via custom **skills and MCP integrations** (Figma + org design system), sharply reduced hallucinated code and cutting design-to-code time by **80%**, improving sprint velocity.
- Translated ambiguous business requirements into well-scoped user stories and acceptance criteria, reducing mid-sprint scope changes by aligning engineering, design, and business stakeholders before development began.
- Owned end-to-end product roadmap across multiple B2B markets, drove feature prioritization decisions that balanced business value and technical feasibility, preventing over-engineered solutions and reducing estimated delivery timelines.

PepsiCo July 2022 – April 2024
Software Engineer Hyderabad, India

- Architected a schema-driven UI system using JSONForms + ReactJS, enabling PepsiCo to launch in Turkey and Mexico without replatforming, reducing per-market development effort by **70%** and cutting regional time-to-market significantly.
- Built an web based analytics dashboard closely in collaboration with UI/UX team for D2C/B2C Mexico marketing and consumer data, achieving **80% adoption within 3 weeks** and supporting business decision-making.

Sparks Foundation Dec 2020 – Jan 2021
Data Science and Business Analyst Intern Remote

- Built Power BI dashboards tracking 10+ KPIs for partner businesses, enabling data-driven growth decisions.

Gopalakrishnan Deshpande Centre for Innovation and Entrepreneurship, I-NSPIRE, IIT Madras
Entrepreneur Lead Remote

- Conducted market research, competitive analysis, GTM strategy development and validated product positioning and assessed product-market fit through customer surveys and user interviews.

PROJECTS

Personal Finance Agent – Agentic Spend Intelligence (Self-Hosted)

- Built a privacy first finance agent that ingests transaction emails via scoped Google OAuth and parses credit, debit, and UPI activity into a categorized spend dashboard, with all data self hosted. Added agentic monitoring alerts on segment-wise budget breaches, projected per-category headroom for the month, and gamified targets.

MagicApply AI – GenAI Powered Job Application Autofill (Chrome Extension)

- Identified that job seekers lose 30-45 mins per application tailoring responses to repetitive questions. Scoped the MVP around an LLM generating tailored answers in real time from a user's profile and job context; built the custom prompt engineering layer for tone, length, and format control, and added guardrails preventing the model from fabricating experience or credentials outside the user's profile.

Medical Information Retrieval Chatbot – Research Project

- Addressed the gap in accessible medical information retrieval by designing an open-domain QA chatbot using a Retriever-Reader pipeline. Published findings in the Journal of Xi'an University of Architecture and Technology.

EXTRACURRICULAR & ACHIEVEMENTS

- Winner of PepsiCo Global DPA Hackathon 2025 and 2026 Q2 (AI-based consumer engagement application/Agentic SDLC).
- President, DreamMerchants Business Club, VIT Vellore (Feb 2020 – Feb 2021).

CORE SKILLS

Product Management & Strategy: Product Roadmap Planning, Feature Prioritization, Backlog Management, User Stories, Acceptance Criteria, Stakeholder Management, GTM Strategy, Agile/Scrum, Sprint Planning, Process Optimization
Technical Foundation: ReactJS, JavaScript, LangChain, RAG, Prompt Engineering, AI Evals, SQL, Python, DAX, UI/UX, Frontend Design, n8n, LLM Application Design, Agentic Workflows
Tools: Figma, Power BI, Google Analytics, Azure DevOps, MCP, Claude, Copilot, Windsurf, Cursor, NotebookLM, Midjourney, ElevenLabs, WisprFlow

EDUCATION

Vellore Institute of Technology, Vellore July 2018 – April 2022
B.Tech in Computer Science Engineering
